

College Students Q&A on Ageism

What is ageism?

Ageism refers to **stereotypes** (how we think), **prejudice** (how we feel) and **discrimination** (how we act) towards others or ourselves based on age.

Who does ageism impact?

Ageism impacts people from all walks of life, at every stage of life. Although ageism can be directed at both young and older adults, it most prominently affects older adults.

How does ageism impact us as we age?

Ageism skews perceptions of the healthy aging experience, individual aptitudes, personal agency, and the vast heterogeneity among the older population.

At the **individual** level, ageism is manifested in private communications and social exchanges that stigmatize aging and devalue the abilities of older adults. It can contribute to internalized ageism and social isolation.¹

Societal ageism appears in public discourse, media depictions, and everyday culture. It can result in employment discrimination, discrepant health care, and economic hardship for older people.²

Ageism is embedded in **institutional** practices, policies, and procedures that reinforce and perpetuate adverse treatment of older adults.

Why should ageism matter to college students?

Ageism results in social, economic, and legal harms. It is an insidious, often unrecognized, and socially accepted bias that diminishes the capabilities and contributions of older people. In addition to eroding elder rights and dignity in aging, ageism tears at the very fabric of a democratic society. It can also contribute to elder mistreatment. Ageism is a pervasive and growing concern that impacts everyone across the age continuum.

Ageism is associated with poorer physical and mental health, lower quality of life, social isolation and loneliness, and premature death⁵

Ageism results in **individual and** societal harms and exacerbates other forms of disadvantage⁶

What do college students think about ageism?

According to the research, most college students lack awareness and education about older age, aging, and elder abuse.⁷ Many of those surveyed expressed some level of confusion, discomfort, negative, and/or indifferent attitudes towards aging and older people.⁸ Students, however, with greater knowledge and empathy regarding older people exhibited decreased levels of ageism.^{9,10}

What can you do to reduce ageism and effect culture change?

- · Actively promote elder rights and justice on campus and in your communities¹¹
- Avoid ageist language and assumptions in communications¹²
- Develop anti-ageism campaigns on campus¹³
- Encourage for your university to integrate aging-related content in curricula¹⁴
- · Spend quality time with older family members, friends, and adults in your community¹⁵
- Volunteer with older adults, or become an intergenerational mentor or mentee to foster meaningful cross-generational connections with older people¹⁶
- Get involved in community initiatives to reduce elder loneliness and help improve health outcomes for older adults¹⁷
- Engage in research and evaluation to develop better measures of ageism and study its impact on elder mistreatment¹⁸

Ageism is an issue that impacts us all.

Don't stand by, stand up to ageism and elder abuse. You can make a difference.
